SUMMARY

Final-year CSE student building agentic and RAG systems end-to-end: LangGraph workflows, retrieval pipelines, FastAPI backends, and evaluation. Built shipped AI projects with measured quality (RAGAS faithfulness **0.82**); **GATE DA 2026 - AIR 1102**.

EXPERIENCE

InAmigos Foundation

May 2026

AI Web Development Intern

Remote

- Audited the foundation's live website and documented frontend, layout, content, and UI/UX improvement areas.
- Built a portfolio site and Figma feature mockups translating NGO website needs into proposed frontend flows.

PROJECTS

Niswarth AI | React, Vite, Tailwind, Supabase Auth/Postgres/RLS, Gemini, Vercel, CI

May 2026 – Present

- Built a full-stack AI workflow platform that turns NGO field updates into human-reviewed impact reports with organization-scoped workspaces and RLS-enforced data isolation.
- Implemented server-side Gemini 2.5 Flash report generation via Vercel API route, local fallback generation, Supabase persistence, and service-layer separation.
- Designed a human-in-the-loop review flow (draft → review → approve/revise) with QA tests, GitHub Actions CI, and Vercel deployment.

Physics Study Buddy | Python, LangGraph, ChromaDB, Groq, LLaMA 3.3 70B, Streamlit, RAGAS

Mar 2026 – Apr 2026

- Built a LangGraph RAG agent for physics Q&A over a 10-document knowledge base with routing, memory, calculator tool use, answer generation, and self-evaluation.
- Grounded responses through ChromaDB retrieval with fallback handling for out-of-scope queries to reduce unsupported answers.
- Validated with 9/10 functional tests and 2/2 red-team tests; RAGAS scores: **0.82** faithfulness, **0.87** answer relevance, **0.78** context precision.

Closira Workflows agent backend | LangGraph, Gemini, FastAPI, SQLAlchemy, SQLite

May 2026

- Built an SOP-grounded LangGraph support workflow with SOP-only answering, rule-based escalation, lead qualification, Gemini summaries with deterministic fallback, and JSONL logs.
- Built a companion FastAPI enquiry backend with async BackgroundTasks, SQLite/SQLAlchemy persistence, SOP matching, follow-up scheduling, timeline history, and structured JSON logging.

Carbonly | Node.js, Express.js, MongoDB, JWT, bcrypt, Chart.js

Dec 2025 – Feb 2026

- Built backend for a team-developed carbon-footprint tracking app: JWT + bcrypt authentication, MongoDB-backed per-user activity history, and dashboard logic.
- Integrated Chart.js emission-trend visualizations and connected the backend to a separate ML prediction service via API.

EDUCATION

Kalinga Institute of Industrial Technology (KIIT)

2023 – Present

B.Tech in Computer Science and Engineering | CGPA: **9.45**

Delhi Public School, Ghaziabad

2019 – 2021

Senior Secondary | Class XII: **93.8%**

SKILLS

Languages: Python, JavaScript, C, Java

AI / LLM Systems: LangGraph, LangChain, RAG, RAGAS, Gemini API, Groq API, Prompt Engineering, Tool Use

Backend / Data: FastAPI, Node.js, Express.js, REST APIs, Supabase, MongoDB, ChromaDB, SQLite, SQLAlchemy, JWT

Frontend / Tools: React, Vite, Tailwind CSS, Streamlit, n8n, GitHub Actions, Vercel, Twilio, Formspre
