SUMMARY

Final-year B.Tech CSE student building practical AI systems around retrieval, agent workflows, backend APIs, human review, evaluation, auditability, and deployment. Built deployed AI projects across industrial GraphRAG, AI-agent safety review, NGO workflow automation, and controlled agentic planning. GATE Data Science and Artificial Intelligence 2026 - AIR 1109.

EDUCATION

Kalinga Institute of Industrial Technology (KIIT)
B.Tech in Computer Science and Engineering | CGPA: **9.45**

2023 – Present
Bhubaneswar, India

EXPERIENCE

KIIT School of Computer Applications

AI/ML Intern

May 2026 – Jul 2026

Bhubaneswar, India

- Completed an 8-week AI/ML-focused summer internship covering modern AI/ML, NLP, cybersecurity, and image-processing concepts through university-led training and guided technical work.
- Prepared **Sahayak AI**, an invention disclosure for a privacy-aware student-support ML system using academic activity patterns, explainable support alerts, mentor review, and feedback-based improvement.
- Strengthened understanding of responsible AI workflows: privacy cleaning, interpretable signals, human-in-the-loop review, evaluation tradeoffs, and safe use of educational data.

InAmigos Foundation

AI Web Development Intern

May 2026

Remote

- Audited NGO website flows and documented frontend, layout, content, and UI/UX improvement opportunities with annotated recommendations.
- Built portfolio/web pages and Figma feature mockups translating NGO requirements into practical frontend flows and user-facing design improvements.
- Strengthened practical web-product thinking by converting vague NGO requirements into clearer page structure, interaction ideas, and implementation-ready design notes.

PROJECTS

Mnemos - Industrial Knowledge Intelligence

🌐 Live 📄 Code ▶ Demo

Next.js 16, React 19, FastAPI, PostgreSQL, pgvector, Neo4j, Redis, LangGraph, OpenTelemetry

- Built an asset-centric operational memory platform that connects manuals, work orders, inspections, procedures, compliance evidence, expert notes, and asset timelines into governed industrial knowledge workflows.
- Implemented hybrid retrieval using vector, lexical, structured, graph, and bounded multi-hop strategies with reranking, provenance checks, contradiction handling, confidence scoring, and missing-evidence disclosure.
- Business impact: reduces maintenance and compliance search friction through evidence-backed RCA, asset passports, compliance-gap workflows, and a governed 11-stage investigation runtime with durable checkpoints and approval gates.
- Added regression-style evaluation gates for citation precision, abstention quality, routing, retrieval recall, and workflow completion without presenting them as production accuracy.

A-DAP-T - AI-Agent Deployment Safety Review

 Live  Code  Demo

Next.js, TypeScript, FastAPI, Firebase Auth, Firestore, Gemini, Vercel, Render

- Built a deployed AI-agent safety review platform that scans GitHub repositories, ZIP uploads, and demo agents for risks such as exposed secrets, unsafe tool permissions, missing approval gates, weak auditability, and sensitive data exposure.
- Implemented security surface mapping, guardrail matrix, deterministic release policy checks, static attack simulations, patch previews, saved reports, report comparison, and an evidence-aware assistant.
- Business impact: turns manual GenAI/agent release review into a repeatable deployment gate, with deterministic ALLOW/REVIEW/BLOCK decisions and Gemini limited to summaries and remediation guidance.
- Added vulnerable/secured demo scans, saved report comparison, attack-path previews, and report-aware assistance so findings can be reviewed rather than treated as opaque AI output.

Niswarth AI - NGO Workflow and Impact Reporting

 Live  Code

React, Vite, Tailwind, Supabase Auth/Postgres/RLS, Gemini, Vercel, GitHub Actions

- Built a full-stack AI workflow platform for NGO campaign coordination with organization-scoped workspaces, multi-workspace switching, role-based dashboards, campaigns, volunteers, field updates, and reports.
- Implemented server-side Gemini 2.5 Flash report drafting with evidence used, missing information, risk flags, next actions, confidence, daily usage limits, fallback generation, and Supabase persistence.
- Business impact: helps NGOs convert fragmented field updates into reviewed impact reports through draft/revision/approval workflows, audit logs, version history, protected API routes, and CI-backed deployment.
- Added controlled AI boundaries: structured report fields, fallback generation, server-side secret handling, usage tracking, and reviewer notes before approval.

ACHIEVEMENTS

- **3rd Prize, Global Tech Innovation 2026** - A-DAP-T, AI-agent deployment safety platform.
- **Technical Excellence Winner, Devlynix Buildathon 2.0** - A-DAP-T.
- **Winner, Zero to Live Website Challenge** - Shodhak, live adventure discovery and booking platform.
- **GATE Data Science and Artificial Intelligence 2026** - AIR 1109.

CERTIFICATIONS

Agentic AI Professional Training - 70-hour course by ExcelR in association with KIIT University.

 Certificate

8 Weeks Summer Internship Certificate - AI/ML/Cybersecurity/Image Processing/NLP, KIIT School of Computer Applications.

 Certificate

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C, Java

AI / LLM Systems: LangGraph, LangChain, RAG, GraphRAG, RAGAS, Gemini API, Groq API, structured outputs, tool use, retrieval evaluation, citation precision, abstention testing, human-in-the-loop AI

Backend / Data: FastAPI, Node.js, Express, Pydantic, REST APIs, SQLAlchemy, PostgreSQL, pgvector, Neo4j, Redis, Supabase Auth/Postgres/RLS/Vault, Firebase Auth, Firestore, MongoDB, SQLite, ChromaDB

Frontend / DevOps: React, Next.js, Vite, Tailwind CSS, Cytoscape.js, Streamlit, Docker, Vercel, Render, GitHub Actions, Pytest, OpenTelemetry hooks, structured logging, Git
